PROFESSIONAL SUMMARY

Full Stack Developer. I have been coding since 2022 and over the past year I focused on building complete web products and taking them to production. I work with React, Next.js and TypeScript on the frontend, Node.js and PostgreSQL on the backend, and real payment integrations. I own the full cycle: client discovery, data modelling, development, deployment and ongoing maintenance. Hands-on experience in e-commerce, data consistency under concurrency, and local-first applications.

EXPERIENCE

Full Stack Developer — Freelance

2022 – Present | La Plata, Argentina (remote)

- Built complete web applications for clients, from initial discovery through production deployment and ongoing maintenance.
- Designed relational data models in PostgreSQL with Prisma, including per-variant stock control that stays consistent under simultaneous purchases.
- Implemented REST APIs and Server Actions in Node.js for business logic, with input validation through Zod and structured error handling.
- Integrated payment gateways (MercadoPago) covering checkout, coupons, order tracking and payment state reconciliation.
- Built admin dashboards with sales metrics, inventory management and report exports.
- Delivered responsive, accessible interfaces with React, Next.js and Tailwind CSS, optimised for load time and real mobile use.
- Continuous deployment on Vercel, version control with Git, and work under agile methodologies (SCRUM).

SELECTED PROJECTS

TheCLUB-Indumentaria — E-commerce platform

2026 | In production | theclubindumentaria.store

Online clothing store built end to end for a commercial brand. Catalogue with size and colour variants, cart, checkout via MercadoPago and bank transfer, coupons and order tracking. Ships with a separate admin dashboard for sales metrics, stock control and Excel exports. The core challenge was keeping per-variant stock consistent under concurrent purchases.

Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL, MercadoPago, Supabase, Zod.

KASHBOARD — Personal finance management

2025 | In production | kash-app-jet.vercel.app

Personal finance application running entirely in the browser, with no backend and no user accounts. Multi-currency support with real-time exchange rates, spending plans with Markdown notes, wealth evolution charts and a local backup system. Local-first architecture on IndexedDB.

React, TypeScript, Tailwind CSS, Dexie.js (IndexedDB), Zustand, Recharts.

ATRIALIFE OS — Personal management system

2026 | In development

Local-first PWA unifying scheduling, training, finances and academic tracking in a single tool. Currently a navigable eleven-screen prototype on a custom component system, with visualisations (heatmap and progression charts) drawn in SVG. Data layer and sync in progress.

React, TypeScript, Tailwind CSS, Vite, PWA, React Router.

TECHNICAL SKILLS

Languages: JavaScript (ES2023+), TypeScript, SQL, Python, HTML5, CSS3.

Frontend: React, Next.js, Tailwind CSS, Zustand, React Router, Recharts, PWA, responsive design, accessibility.

Backend: Node.js, Express, Server Actions, REST APIs, Zod, authentication and authorisation.

Databases: PostgreSQL, Prisma, Supabase, MongoDB, MySQL, IndexedDB (Dexie.js).

Tools and practices: Git, Vite, Vercel, MercadoPago, SCRUM, code review, continuous deployment.

EDUCATION

BSc in Data Science for Organisations

Universidad Nacional de La Plata | In progress

LANGUAGES

Spanish — native. English — C1 (advanced), technical reading and professional communication.
